

Chapter 12 The Lymphatic System

Start studying Chapter 14 Lymphatic System. Learn vocabulary, terms, and more with flashcards, games, and other study tools.

Chapter 14 Lymphatic System Flashcards | Quizlet

The lymphatic system is part of the vascular system and an important part of the immune system, comprising a large network of lymphatic vessels that carry a clear fluid called lymph (from Latin, *lympa* meaning "water") directionally towards the heart.

Lymphatic system - Wikipedia

1. All of the following belong to the lymphatic system EXCEPT lymph. lymphatic vessels. red bone marrow. yellow bone marrow. 2. Which of the following cells produce antibodies?

anatomy and physiology chapter 12 Flashcards - Quizlet

Lymph (from Latin, ancient Roman deity of fresh water, *Lympha*) is the fluid that flows through the lymphatic system, a system composed of lymph vessels (channels) and intervening lymph nodes whose function, like the venous system, is to return fluid from the tissues to the central circulation.

Lymph - Wikipedia

Figure 1. Anatomy of the Lymphatic System. Lymphatic vessels in the arms and legs convey lymph to the larger lymphatic vessels in the torso. A major distinction between the lymphatic and cardiovascular systems in humans is that lymph is not actively pumped by the heart, but is forced through the vessels by the movements of the body, the ...

Figure 2. Chylomicrons. Chylomicrons contain triglycerides, cholesterol molecules, and other apolipoproteins (protein molecules). They function to carry these water-insoluble molecules from the intestine, through the lymphatic system, and into the bloodstream, which carries the lipids to adipose tissue for storage.

24.3 Lipid Metabolism - Anatomy and Physiology

Most people don't give their lymphatic system a second thought until it isn't working properly. This session will explore the body's "other" circulatory system, its development and purpose, and disorders associated with lymph channels, glands, and fluid.

Vascular system (blood circulatory system) and lymphatic system. 6. What is gastroesophageal reflux disease? Gastroesophageal reflux disease (GERD) occurs when the lower esophageal sphincter (LES) is weak or relaxes inappropriately, allowing the stomach's contents to flow back up into the esophagus. The acidic stomach contents irritate the esophageal lining, causing severe pain. Chapter 5. 1 ...
