Electrical Conduction. 19.2 Ohm's Law . When an electric potential V is applied across a material, a current of magnitude I flows. In most metals, at low values of V , the current is proportional to V , according to Ohm's law:

Alternating-Current Circuits 12.1 AC Sources In Chapter 10 we learned that changing magnetic flux can induce an emf according to Faraday's law of induction.

Norton's theorem holds, to illustrate in DC circuit theory terms (see that image): Any linear electrical network with voltage and current sources and only resistances can be replaced at terminals A-B by an equivalent current source I_{no} in parallel connection with an equivalent resistance R_{no} .

Electrical injury is a physiological reaction caused by electric current passing through the (human) body. Electric shock occurs upon contact of a (human) body part with any source of electricity that causes a sufficient magnitude of current to pass through the victim's flesh, viscera or hair.
