In thermodynamics, an isentropic process is an idealized thermodynamic process that is both adiabatic and reversible. The work transfers of the system are frictionless, and there is no transfer of heat or matter.

Thermal Conductivity of Glass. Glass is a non-crystalline amorphous solid that is often transparent and has widespread practical, technological, and decorative usage in, for example, window panes.

The heat conduction equation is a partial differential equation that describes the distribution of heat (or the temperature field) in a given body over time.

Mechanical Engineering applies the principles of physics to the analysis, design, and maintenance of mechanical systems. It defines how and why mechanical systems work, define how long a mechanical system will work, and predict when they will fail.

In many areas of industry, it is desirable to create geometric models of existing objects for which no such model is available. This paper reviews the process of reverse engineering of shapes.

Reverse engineering of geometric models—an introduction ...

The adsorption isotherm relates the equilibrium adsorbed amount of a molecule to the bulk solution concentration of this molecule at a given temperature , . An example of an adsorption isotherm for PEO homopolymers of various molecular weights adsorbing on silica from water at 25 °C is given in Fig. 1.
