Microfabrication is the process of fabricating miniature structures of micrometre scales and smaller. Historically, the earliest microfabrication processes were used for integrated circuit fabrication, also known as "semiconductor manufacturing" or "semiconductor device fabrication".

Microfabrication - Wikipedia

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal.

Among the popular photocatalysts, ZnO is one of the most potent photocatalysts considering its green properties, cheap price, and durability. However, the practical application of ZnO is limited because of its large band gap energy and rapid recombination of the photoinduced electron-hole pairs.

Understand How Design Interdependencies Impact Circuit Performance. For the builders of tomorrow, creating the electronic systems that enable smart living will require advanced design technologies on multiple levels—semiconductor, chip packaging, system interconnect, hardware-software integration, system verification, and more.
