The heat conduction equation is a partial differential equation that describes the distribution of heat (or the temperature field) in a given body over time.

Introduction. Control rods are an important technology for maintaining the desired state of fission reactions within a nuclear reactor. They constitute a real-time control of the fission process, which is crucial for both keeping the fission chain reaction active and preventing it from accelerating beyond control.

Thermal Conductivity of Glass. Glass is a non-crystalline amorphous solid that is often transparent and has widespread practical, technological, and decorative usage in, for example, window panes.

In nuclear engineering, a delayed neutron is a neutron emitted after a nuclear fission event, by one of the fission products (or actually, a fission product daughter after beta decay), any time from a few milliseconds to a few minutes after the fission event.

In nuclear engineering, fissile material is material capable of sustaining a nuclear fission chain reaction. By definition, fissile material can sustain a chain reaction with neutrons of thermal energy.

In Engineering Mathematics II, we focus on "Multivariable Calculus and Field Theory", "Fourier Methods and Partial Differential Equations", and "Complex Variable Theory" to cover the rationale and of particular the engineering applications.

In fisica, la potenza è definita operativamente come l'energia trasferita nell'unità di tempo. Viene anche utilizzata per quantificare l'energia prodotta o utilizzata da un sistema fisico.
