

Lehninger Principles Of Biochemistry 6th

A cofactor is a non-protein chemical compound or metallic ion that is required for an enzyme's activity as a catalyst, a substance that increases the rate of a chemical reaction.

Cofactor (biochemistry) - Wikipedia

In biochemistry and pharmacology, the Hill equation refers to two closely related equations that reflect ligands binding to macromolecule. The distinction between the two equations is whether they measure occupancy (the fraction of a macromolecule saturated by ligand) or response (the physiological output of the system, such as muscle contraction).
