I am TA'ing a graduate compressible flow course next semester and I'm wondering if there is a solutions' or instructor's manual to Anderson's "Modern compressible flow" 3rd edition. I've looked around the web and haven't found anything. The only match I got was a solutions manual to the 1st edition from 1990.

**Modern Compressible Flow: With Historical Perspective 3rd ...**

Modern Compressible Flow 3rd Solution Compressible flow (or gas dynamics) is the branch of fluid mechanics that deals with flows having significant changes in fluid density. Gases, mostly, display such behaviour. While all flows are compressible, flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less ...

integral in Equation (11) is physically the decrement in momentum flow that exists across the --  
W6ke, and from Equation (11), this #ake momentum decrement is equal to the drag on the body.  
For incompressible flow,  $p$  : constant and is known.
