

Polymer Science And Technology Joel

About Polymer Science. Polymer Science, or macromolecular science, is a subfield of materials science concerned primarily with synthetic polymers such as plastics and elastomers.

A polymer (/ ˈ p ɒ l ɪ m ə r /; Greek poly-, "many" + -mer, "part") is a large molecule, or macromolecule, composed of many repeated subunits. Due to their broad range of properties, both synthetic and natural polymers play essential and ubiquitous roles in everyday life. Polymers range from familiar synthetic plastics such as polystyrene to ...

This chapter introduces the basics of polymer science, including classification of polymers, polymer structure, molecular weight, chemical structure, and thermal transitions.

1.3 Molecular Weight | Introduction to Polymer Science ...

The word polymer is derived from the classical Greek words poly meaning "many" and meros meaning "parts." Simply stated, a polymer is a long-chain molecule that is composed of a large number of repeating units of identical structure.

A thermosetting polymer, resin, or plastic, often called a thermoset, is a polymer that is irreversibly hardened by curing from a soft solid or viscous liquid prepolymer or resin. Curing is induced by heat or suitable radiation and may be promoted by high pressure, or mixing with a catalyst.
