Probability is the measure of the likelihood that an event will occur. See glossary of probability and statistics. Probability quantifies as a number between 0 and 1, where, loosely speaking, 0 indicates impossibility and 1 indicates certainty.

Probability - Wikipedia

Probability and statistics, also called statistics and probability, are two related but separate academic disciplines. Statistical analysis often uses probability distributions, and the two topics are often studied together.

I am trying to determine whether there is an association between time spent online and reported problems. I have divided my participants into two groups: the low user group and the high user group.

What statistical analysis should I use for Likert-Scale data?

What is Linear Regression? In a cause and effect relationship, the independent variable is the cause, and the dependent variable is the effect.

Third, the ways in which things like confidence intervals are determined or sample size chosen are mostly conventions (often without justification) that rely on sets of assumptions.
